Proprietary Raw Material

Vitaline is an all natural form of CoQ10, derived from a yeast fermentation process, not from bacteria or plant matter (tobacco). The Vitaline proprietary material has properties which improve absorption, bio-availability and safety. No other CoQ10 product uses the same material or specifications.

Many of the CoQ10 products in the marketplace (including national brands) use synthetic forms of CoQ10 or blends which include synthetic forms. Synthetic (cis-isomer) CoQ10 is not identical to the CoQ10 used by the body, and has not been shown to be in a bio-available form. Safety, tolerability and efficacy profiles of high dose synthetic CoQ10 have not been conducted.
